

GARV VERMA

Data & Analytics | AI/ML | Python | Tableau | Power BI
+91 7470737608 | garv.verma2024@nst.rishihood.edu.in | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Data & Analytics enthusiast pursuing B.Tech in Artificial Intelligence at Newton School of Technology. Skilled in Python, SQL, Tableau, Power BI, Pandas, and scikit-learn. Experienced in end-to-end data pipelines, exploratory analysis, statistical validation, and interactive dashboard design. Passionate about transforming raw datasets into actionable business insights.

EDUCATION

Bachelor of Technology — Artificial Intelligence 2024 – 2028

Newton School of Technology, Rishihood University | GPA: 6.0/10.0

Intermediate — Class XII 2023 – 2024

Oxford International School | 69.4%

Matriculation — Class X 2021 – 2022

Vidyasagar School | 81.33%

PROJECTS

TTC Subway Delay Data Analysis Jan 2025

Toronto Transit Commission — Urban Transit Intelligence

github.com/anand-242003/SectionC_Group17_TTC-Subway_Delay_Data

- Analyzed 25,716 delay incidents across 476 stations and 3 subway lines (YU, BD, SHP) covering the full year 2025, deriving 5 additional analytical features from 11 raw columns.
- Built a 16-column cleaned dataset in Google Sheets using VLOOKUP, ARRAYFORMULA, and IF-based imputation, achieving 100% completeness from a raw file with 36.8% missing directional data.
- Developed a 4-tab data architecture (Raw → Cleaned → Dictionary → Analysis) with pivot tables identifying Wednesday as peak delay day and Kennedy, Bloor, and Finch as the top 3 delay hotspots (17% of incidents).
- Classified 132 delay codes into severity tiers (No Delay, Minor, Moderate, Major) and time periods (AM/PM Peak, Midday, Evening, Night), enabling root-cause segmentation across YU line (50.9% of incidents).

The Unplanned Basket — Quick Commerce Impulse Analytics Feb 2025

Newton School of Technology | Data Visualization & Analytics Capstone | Section C, Group 19

github.com/Arya756/DVA_Capstone2_C_G19

- Engineered a composite impulse-proxy scoring model across 13,000 Blinkit SKUs in 10 Indian cities, quantifying 21.6% of total revenue (~₹110.1M) as impulse-driven using a weighted feature formula (pack size, perishability, category, offer).
- Conducted 5 statistical hypothesis tests (Welch t-test, Mann-Whitney U, ANOVA, Kruskal-Wallis, Linear Regression) establishing a statistically significant 6× convenience premium for small packs over bulk ($t=49.40$, $p \approx 0.00$).
- Built a 4-dashboard Tableau suite (Market Pulse, Where Impulse Lives, Pack Price Ladder, Geography & Promo) published on Tableau Public, surfacing that impulse is a pricing phenomenon — not a volume one.
- Executed a 5-notebook Python ETL pipeline (pandas, scipy, statsmodels, matplotlib, seaborn) from raw Kaggle data to Tableau-ready extract, with data dictionary, KPI framework, and business recommendations for Blinkit's category & pricing teams.

SKILLS

Languages

Python, SQL, JavaScript, HTML/CSS

Analytics	Pandas, NumPy, SciPy, Statsmodels, Scikit-learn, TensorFlow
Visualization	Tableau, Power BI, Matplotlib, Seaborn
Data Tools	Google Sheets (ARRAYFORMULA, VLOOKUP), MySQL, Excel
ML / AI	Logistic Regression, SVM, Random Forest, LSTM, YOLOv8, NLP, LLMs, GenAI
Dev Tools	Flask, Streamlit, React, OpenCV, Figma, Git/GitHub, Jupyter
Other	ETL Pipelines, Statistical Hypothesis Testing, Dashboard Design, Data Cleaning

COURSES & CERTIFICATIONS

- Data Structures & Algorithms
- Generative AI & Large Language Models (LLMs)
- Entrepreneurship & Business Analytics
- OpenAI API Development

COMPETITIVE PROGRAMMING

Active on: **HackerEarth** • **HackerRank** • **CodeChef** • **Codeforces** • **LeetCode**
